

The DVR Flex E series utilizes the lightning fast Blackfin™ Video Processors. With the new enhanced H.264 compression method the Flex E makes internet transmission as well as local recording fast, stable, and seamless. Incorporating a user friendly mouse interface and an advanced tutorial based menu, the Flex E makes install, setup and service trouble free. The Flex E DVR records at 30 fps per channel with synchronized audio on each channel as well. It has an internal RAID storage feature allowing for full redundancy of all hard drives. With full D1 (704x480) resolution, recorded video images are crisp and clear making evidence sharing and reviewing precise.

### Main Features:

- Embedded Linux OS
